DETAILED ACTION

1. The following correspondence is an Office Action for Application No. 10/523,926 for a VIBRATION ISOLATING PIPE CLIP, filed on 2/7/2005. This correspondence is in response to applicant's reply filed on 3/30/2009. Claims 53-62 are pending.

Priority

2. Applicant is advised of possible benefits under 35 U.S.C. 371 based upon Application No. 1021220 filed in the Netherlands on August 6, 2002, wherein an application for patent filed in the United States may be entitled to the benefit of the filing date of a prior application filed in a foreign country.

Allowable Subject Matter

3. Claims 53-62 are allowed.

Reasons for Allowance

4. The following is an examiner's statement of reasons for allowance: regarding claims 53 and 58, the prior art does not teach a vibration isolating member which bears against an inner circumference of the pipe clip body and is ultimately positioned between an outer circumference of the pipe and the pipe clip body under elastic deformation, wherein the vibration isolating member is a porous vulcanized rubber with closed cavities and separating walls between them, wherein the cavities are substantially unpressurized by dehydration of salt which remains in the cavities, in such a manner that in the event of a reduction in the volume of the cavities under the influence of deformation of the vibration isolating member, no significant pressure increase occurs inside the cavities, wherein the vibration isolating member has a form

factor defined by the quotient of the surface area which is subject to load and the free surface area, and in which the cavities significantly reduce the form factor, and wherein the form factor of the vibration isolating member is less than 0.2, in combination with the other elements recited, and regarding claim 54, the prior art does not teach a vibration isolating member which bears against an inner circumference of the pipe clip body and is ultimately positioned between an outer circumference of the pipe and the pipe clip body under elastic deformation, wherein the vibration isolating member is a porous vulcanized rubber with closed substantially unpressurized cavities and separating walls between them having a chemical from which water has been cleaved, wherein the unpressurized cavities when reduced in volume by deformation of the vibration isolating member, produce no significant pressure increase inside the cavities, in combination with the other elements recited.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
